

## Special Features

Broadgate firmly believes in innovation and advancement. Our continuous research and development efforts help us in offering newer and easier solutions to clients. Our team is currently working on making Aspirant better and comprehensive by adding more features like, accounting and training.

Aspirant also has a unique 'Chat' feature that allows one-to-one conversation between all the parties. This 'Chat' feature ensures that all the parties can communicate quickly and easily thereby reducing noise. A registered employee can communicate with the recruitment team using the 'Chat' feature

Similarly, a registered employer could also communicate with the recruitment team freely and express all their employee preferences for a job so as to reduce deviances and make their expectations clear. Furthermore, all the communication that happens on the 'Chat' are recorded for future reference.

Apart from the above features, Broadgate also includes custom features depending on the feasibility of such.

## About us

Broadgate is a front-runner in developing custom software for valued clients. We utilize front-line technologies to build next-gen enterprise applications which cater to businesses for process automation.

We strongly believe in the capabilities of next-gen programming language hence we pioneered in building enterprise applications to suit a thin client-tier environment. The constant research and development efforts put in by our team add value to our solutions thereby improving the application performance and developing advanced software.

Our domain expertise in building software which meets the specialized requirement of clients is immense. We have been designing frameworks and building robust enterprise applications using our technologies extensively to streamline business processes and provide value for client investment.

## Aspirants

In the present day's global business environment, human intellectual capital is being considered as one of the most important factors that determine the success of any organization. Human Resources are now treated as assets which can generate growth opportunities for a company and give it a competitive edge. Hence, organizations have become increasingly selective about all the processes that are undertaken to hire the right employee. In addition to that, organizations have also recognized other factors like time, huge costs of advertising, improper communication as constraints to process of recruitment. One can safely say that human resource recruitment is now a challenging task.

Broadgate is introducing Aspirant, a human resource recruitment and management system, which integrates next-gen technologies and domain expertise to meet every organization's human resource management requirements. Starting from the initial stages of recruitment to later management processes, Aspirant aids organizations in smooth running of operations. Aspirant works closely with both all the parties thereby breaking down all the barriers and ensuring successful execution of tasks.
